EMMAN SHARED INFORMATION SECURITY SERVICE

Automated Accredited Penetration Testing

This service offers a comprehensive solution for organisations to perform automated accredited infrastructure and web application penetration tests in order to identify security flaws within your network perimeter before they are exploited by a malicious attacker or internet worm.

Key features of this service are:

- Specifically designed modules to test for common vulnerabilities.
 - Ability to scan web applications and/or infrastructure for vulnerabilities.
 - On demand or scheduled scanning.
 - Results displayed online or can be downloaded in PDF, XML or LATEX formats.
 - Web based user front end for easy administration.
 - Continually updated vulnerability database.
 - No requirement for a specialist to be on site to run these tests which significantly reduces costs.
- Reports can be used for audit compliance purposes as tests are CHECK accredited.
 - Provides instructions on how to secure any discovered vulnerabilities.

The scanner is delivered by ESISS in conjunction with SEC-1 who specialise in web application security assessment and are a Council of Registered Ethical Security Testers (CREST) member organisation.

This service has two levels of pricing. The first level is limited to 60 scans per year against any IP address or public facing web application within your organisation's address space and costs £1000 (+VAT) per annum.

The second level allows unlimited scans against any IP address or public facing web application within your organisation's address space and costs £3000 (+VAT) per annum.
